INTRODUCTION

This literature survey cites 4930 reports, articles and other documents that were announced between March 1970 and December 1973 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. This publication supplements *Remote Sensing of Earth Resources* (NASA-SP-7036) that cited documents announced between January 1962 and February 1970. Beginning in 1974, a quarterly publication, *Earth Resources, A Continuing Bibliography* (NASA-SP-7041) was initiated. The first issue, NASA-SP-7041(01), was published in June 1974 covering the documents announced between January 1974 and March 1974.

The coverage includes documents related to the identification and evaluation by means of sensors in spacecraft and aircraft of vegetation, minerals, and other natural resources, and the techniques and potentialities of surveying and keeping up-to-date inventories of such riches. It encompasses studies of such natural phenomena as earthquakes, volcanoes, ocean currents and magnetic fields; and such cultural phenomena as cities, transportation networks, and irrigation systems. Descriptions of the components and use of remote sensing and geophysical instrumentation, their subsystems, observational procedures, signature and analyses and interpretive techniques for gathering data are also included. Reports generated under NASA's Earth Resources Survey Program and announced during the period covered by this bibliography are included.

Because of the volume of citations, the *Abstract Section (Section 1)* and the *Index Section (Section 2)* are separately bound.

Abstract Section (Section 1). The *Abstract Section* is divided into nine subject categories (see Table of Contents for scope note of each category). Each entry consists of a standard bibliographic citation accompanied, in most cases, by an abstract. Each of the citations has several data elements useful for identification and indexing purposes. Typical citations from *STAR* and *IAA* appear on page viii following the Table of Contents. The citations and abstracts are reproduced exactly as they appeared originally in *STAR*, or *IAA*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the variation in citation appearance.

Under each of the nine categories, the entries are presented in one of two groups that appear in the following order:

- *IAA* entries identified by accession number series A70-10,000 in ascending accession number order.
- *STAR* entries identified by accession number series N70-10,000 in ascending accession number order.

Index Section (Section 2). The *Index Section* is divided into the following five indexes -- subject, personal author, corporate source, contract number and report/accession number. Typical index listings appear at the beginning of each index. The subject indexing that originally appeared in *STAR* or *IAA* has been augmented by the addition of geographical place names to improve the retrieval of such places in this publication.

Typical Subject Index Listing

The subject heading is a key to the subject content of the document. The Notation of Content (NOC), rather than the title of the document, is usually used to provide a more exact description of the subject matter. (AIAA occasionally uses the title in lieu of the NOC.) The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The page number indicates the page in the abstract section on which the citation is located. The NASA accession number denotes the number by which the citation is identified within the subject category. The NOC's are arranged under each subject heading in ascending accession number order.
